We now offer our patients this new state of the art technology (Velscope), which is 99% accurate in detecting oral cancer even in early stages. This in depth procedure is recommended for all adult patients at their initial visit and then yearly. The test is above and beyond the traditional oral cancer screening in that it picks up changes in the oral tissue that can't be seen by the human eye. A standard visual oral cancer exam will continue to be done at your 6 month recall. The test is performed in the office in only minutes. The fee for this service is \$25.00. The office policy is that the patient will pay for this procedure up front and we will submit to your insurance company for you. Should there be reimbursement by your insurance company the payment would be refunded to you.

This procedure can actually save your life.

_____ **Yes, I wish to have the Velscope oral cancer screening performed.**

_____ **No, I waive my right to have the Velscope oral cancer screening performed.**
